Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mean 8.416; Variance 4.601; scale 1.829

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Spears PA;	New oligo:nucleotide probes specific for Mycobacteria - used for detection and amplification of Mycobacteria nucleic acid in samples  Claim 3: Page 14; 23pp; English.  Claim 3: Page 14; 23pp; English.  Oligonucleotide probe MK14-A consists of nucleotides 5-95 of MK14 (Oli735). It hybridized to all spp. of mycobacteria tested, but cross reacted to a few non-mycobacterial spp. The probe may be useful as an initial screen for mycobacterial infection. C 70466 is a generic DNA sequence used to generate random TSAR (Totally
Synthetic Affinity Reagents) peptides. This generic formula can also be
represented as follows:X(NNB)1(TGC) (NNB)10(TGC)2(NNB)4Z(NNB)8(TGC)(NNB)
C 9Y. X and Y are flanking restriction sites (X is not the same as Y)
that are not specified further. Other generic sequences are shown in
Q70466-68. Other specific peptides generated by these generic sequences
are shown in R65151-54. TSARs are concatenated heterofunctional proteins
or peptides, comprising at least two functional regions - a binding
domain with affinity for a ligand and a second effector peptide portion
that is chemically or biologically active. They may further comprise a
                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                          Generic DNA sequence to generate a random TSAR-9 petide library.

Oligonuclectide probe MK14+A consists of nuclectides 5-95 of 1016ponuclectide probe MK14+A consists of mycobacteria tested, 167035). It hybridized to all spp. of mycobacteria tested, cross reacted to a few non-mycobacterial spp. The probe may be useful as an initial screen for mycobacterial infection. Sequence 91 8P; 5 A; 17 C; 15 G; 4 T;

linker peptide between the 2 domains. The oligonucleotides are also designed so that the expressed peptide contains 2 or 4 cysteine residues positioned in, or flanking, the unpredicted or variant residues. These residues confer some degree of conformational rigidity to the peptides. The TSARS or compsns. comprising a TSAR binding domain can be used in vivo to deliver a chemically or biologically active moiety, eq. metal ion, radioisotope, peptide, toxin or enzyme, to the specific target or on the cell. They can also replace the function of macromolecules, eg. monoclonal or polyronal antibodes and therefore circumvent the need for complex methods of hybridoma formation or in vivo antibody production. The TSARS are easily characterised and have designed activity allowing

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A method for treating airway disease in a subject has been produced, which involves the topical administration of an essentially adenosine free antisense oligonucleotide (ON) to the airway epithelium of the subject. The present sequence is an antisense oligonucleotide specific for the human interleukin 8, targeted at the initiation codon. The method can be used to treat airway diseases such as cystic fibrosis, asthma, chronic obstructive pulmonary diseases, bronchitis and other airway diseases characterised by an inflammatory response. By eliminating adenosine from the antisense ON, its liberation upon antisense degradation is prevented, thereby preventing adenosine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |:| | :|:::|: || :| || :| || 3487 CIGGCIGIGGCCGGGTCCAGGATGCICITGAAGTCTGAGGGCAGTGCCGG 3428

Introducing random point mutations into nucleic acods -
Introducing random point mutations into nucleic acods -
Introducing random stranded template, annealing a primer, elongation,
maisincorporation, completion of molecules and screening.
Bisclosure: p; English.
Random point mutations were introduced into the alpha fragment of
E.Coli beta-galactosidase. The wild type sequence was obtained as a
single stranded template and an oligonuclectide was hybridised to
it to generate a popn of DNA molecules which terminate at all
possible nuclectide positions within a specified region. The
voriable 3' ends generated in this way are used as primers for
reverse transcriptase. Nuclectides are misincorporated by the
transcriptase and the molecules are completed to forms that can be
amplified and then expressed in a suitable host-vector system.
The sequence covers all 176 diffit base substitutions, most of which
see also P80575.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            FOURTON DAY, MAY DAY, WPI; 94-27939/34.

Identifying proteins or peptide(s) which bind a ligand - by screening a recombinant vector library expressing fusion proteins comprising a binding domain and an effector domain Disclosure; Page 35: 255pp; English.

070469 is a generic DNA sequence used to generate random TSAR peptide This generic Commula can be represented as follows: X(TGC)(NNB)10-(TGC)(NNB)5Z(NNB)2(TGC)(NNB)14(TGC)x x and Y are flanking restriction sites (X is not the same as Y) that are not specified further. This sequence generates peptides that are cloverleaf in structure. Other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2034 GAGGIGAGACGCICCGCCCCTCTTTCTCTGCGGAACGTTCTGGCTCCCACGACGTAGTCC 1975
